

Forest Nutrition & Biogeochemistry

- Objectives
 - Overview of forest nutrition and biogeochemistry
 - Inputs, internal cycling, and losses of essential nutrients
 - First, thoughts and insights from the reading assignment

Forest Nutrition & Biogeochemistry

- Macro- and micro-nutrients

Table 11.2 Macro-nutrient Elements Required by Plants and their Source within Terrestrial Ecosystems

| Element | Symbol | Source |
|------------|--------|--|
| Carbon | C | Atmosphere |
| Hydrogen | H | Water |
| Oxygen | O | Atmosphere, water |
| Nitrogen | N | Organic matter, atmosphere |
| Phosphorus | P | Mineral soil, organic matter |
| Potassium | K | Mineral soil, organic matter |
| Sulfur | S | Mineral soil, organic matter, atmosphere |
| Magnesium | Mg | Mineral soil |
| Calcium | Ca | Mineral soil |

Source: After Brady (1990).

Table 11.3 The Biochemical Function of Plant Macro-nutrients, their Form of Uptake, and Typical Leaf Concentrations in Plants

| Element | Biochemical Function(s) | Form Assimilated | Leaf Concentration |
|--|--|---|--------------------|
| Carbon (C) Hydrogen (H) Oxygen (O) | Form the basic building blocks of all biologically-active compounds | CO ₂ , H ₂ O | 90-98% |
| Nitrogen (N) | Nucleic acids, amino acids, proteins, chlorophyll, anthocyanins, alkaloids | NH ₄ ⁺ , NO ₃ ⁻ | 1-4% |
| Phosphorus (P) | Nucleic acids, nucleitides, sugar phosphates, phospholipids | H ₂ PO ₄ ⁻ | 0.1-0.4% |
| Potassium (K) | Enzyme co-factor, osmotic regulation, cell ion balance | K ⁺ | 1% |
| Calcium (Ca) | Pectin synthesis and cell wall formation, metabolism/formation of nucleus and mitochondria, enzyme activator | Ca ²⁺ | 0.8% |
| Sulfur (S) | Amino acids, proteins, sulfolipids | SO ₄ ²⁻ | 0.2% |
| Magnesium (Mg) | Chlorophyll, enzyme co-factor | Mg ²⁺ | 0.2% |

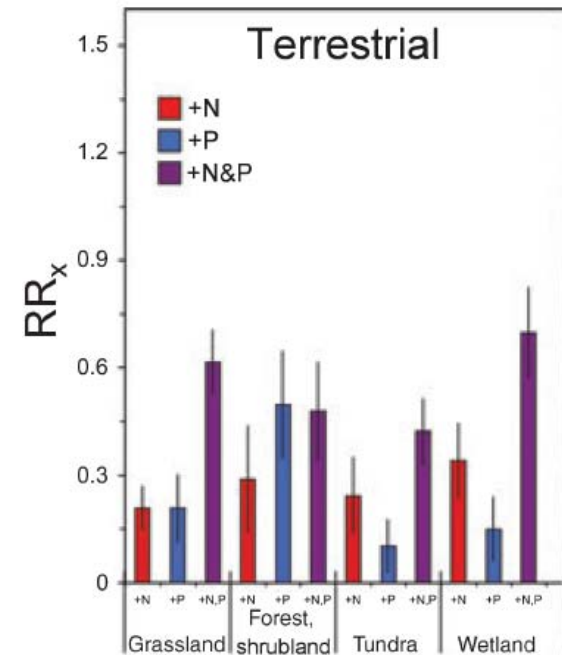

Source: After Salisbury and Ross (1992).

Forest Nutrition & Biogeochemistry

- Nutrient Limitation to Growth

- Meta-analysis (Elser *et al.*, 2007)

- 173 studies
- % change in NPP with nutrient addition (N, P, and N+P vs. Control)

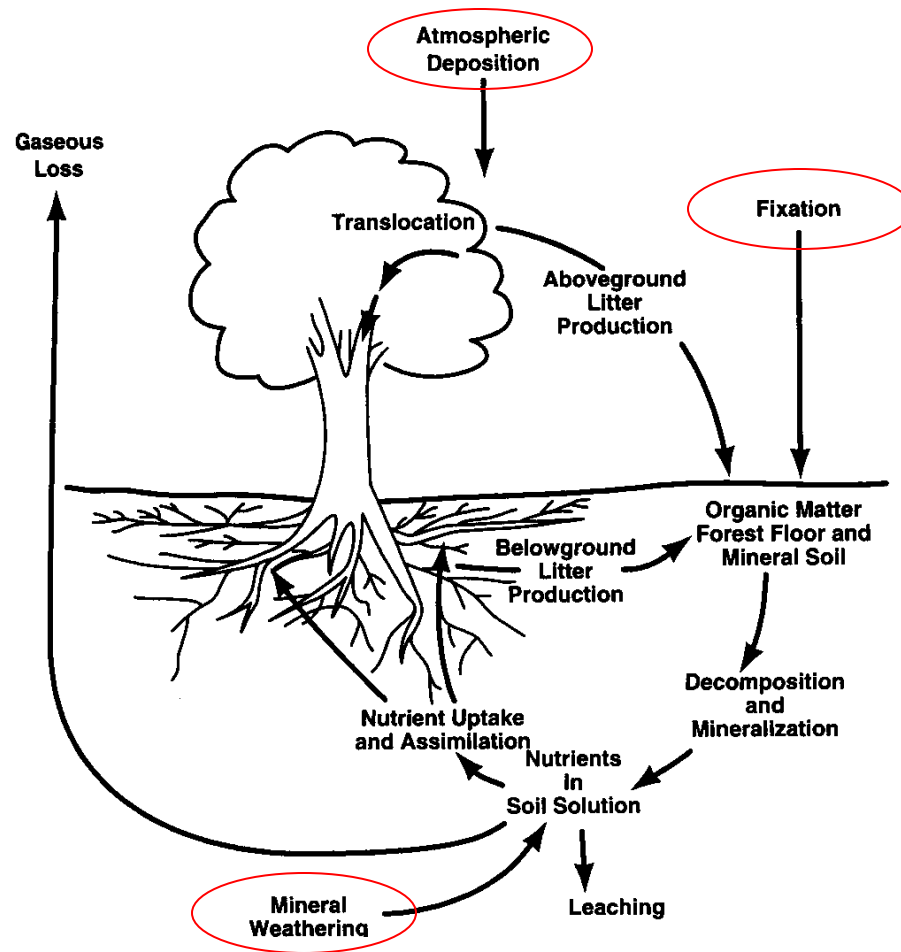

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - Inputs

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - Internal Recycling

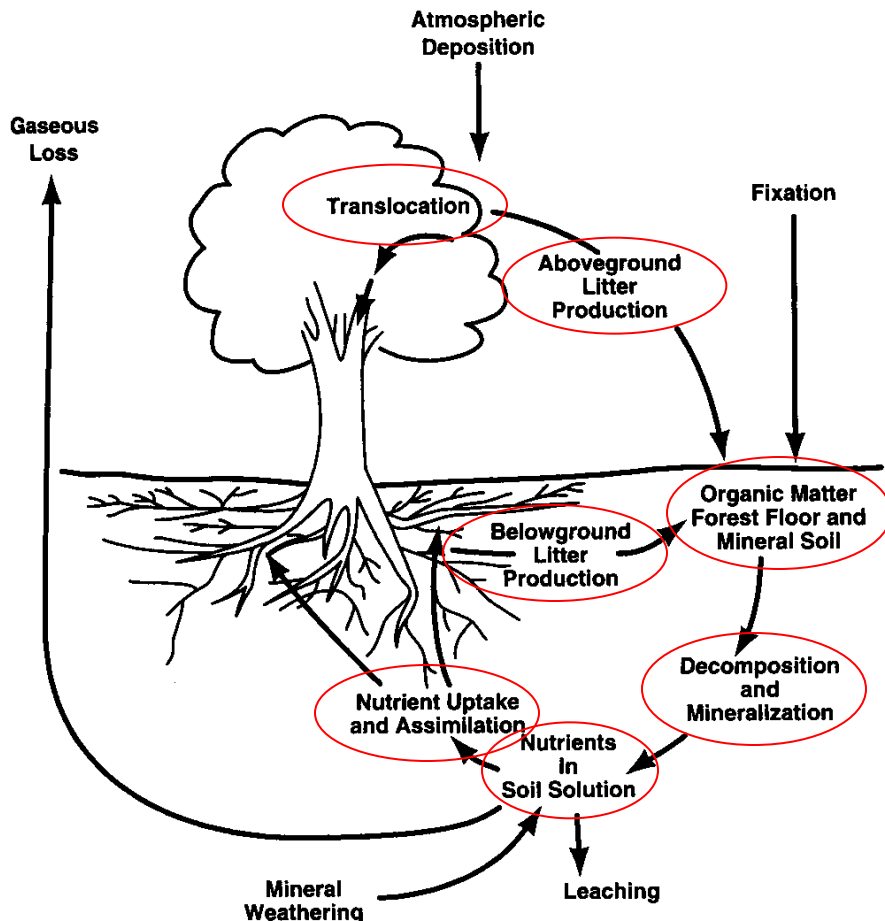

Table 7.1. Major Sources of Nutrients that Are Absorbed by Plants^a.

| Nutrient | Source of plant nutrient (% of total) | | |
|----------------------------------|---------------------------------------|------------|-----------|
| | Deposition/fixation | Weathering | Recycling |
| Temperate forest (Hubbard Brook) | | | |
| Nitrogen | 7 | 0 | 93 |
| Phosphorus | 1 | < 10 | > 89 |
| Potassium | 2 | 10 | 88 |
| Calcium | 4 | 31 | 65 |
| Tundra (Barrow) | | | |
| Nitrogen | 4 | 0 | 96 |
| Phosphorus | 4 | < 1 | 96 |

Diffusion

Mass Flow

Root Interception

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - Plant Acquisition

TABLE 8.2. Mechanisms by which nutrients move to the root surface.

| Nutrient | Quantity absorbed by the plant (g m^{-2}) | Mechanism of nutrient supply (% of total absorbed) | | |
|----------------------------------|--|--|-----------|-----------|
| | | Root interception | Mass flow | Diffusion |
| Sedge tundra (natural ecosystem) | | | | |
| Nitrogen | 2.2 | | 0.5 | 99.5 |
| Phosphorus | 0.14 | | 0.7 | 99.3 |
| Potassium | 1.0 | | 6 | 94 |
| Calcium ^a | 2.1 | | 250 | 0 |
| Magnesium | 4.7 | | 83 | 17 |

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - Losses

Table 19.8 Nutrient leaching from an intact northern hardwood-dominated watershed in the Hubbard Brook Experimental Forest, New Hampshire.

| NUTRIENT | Leaching Loss | Input kg ha ⁻¹ y ⁻¹ | Export (-) or Retention (+) |
|----------|---------------|--|--------------------------------|
| N | 4.0 | 20.7 | 16.7 |
| P | 0.019 | 0.036 | 0.017 |
| S | 17.6 | 18.8 | 1.2 |
| K | 2.4 | 0.9 | -1.5 |
| Ca | 13.9 | 2.2 | -11.7 |
| Si | 23.8 | 0 | -23.8 |

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - Ecosystem Distribution

Table 18.5 The distribution of biomass in selected boreal, temperate, and tropical forest ecosystems.

| | Boreal | Temperate | | Wet Tropical |
|-----------------------------------|---------------------------|-------------------|-----------------------|-------------------------------|
| Location | Alaska USA | Washington USA | New Hampshire USA | Amazon Brazil |
| Overstory Dominant Species | black spruce | Douglas- fir | sugar maple -beech | mixed species ¹ |
| Age (yrs) | 95 | 60 | 55 | mature |
| Biomass Pools | Mg ha⁻¹ | | | |
| Overstory | 50 | 410 | 165 | 990 |
| Woody Debris | — | 9 | 29 | 18 |
| Forest Floor | 76 | 15 | 48 | 7 |
| Mineral Soil | 152 | 119 | 173 | 250 |
| Heterotroph | <1 | <1 | <4 | <1 |
| Total | 278 | 553 | 419 | 1265 |
| % in Soil & Litter | 82% | 24% | 48% | 20% |

Table 19.9 Distribution of N in tropical temperate, and boreal forest ecosystems.

| | Boreal | Temperate | | | Wet Tropical |
|-----------------------------------|-----------------------------|-------------------|-------------------------|------------------|---------------------|
| Location | Alaska USA | Washington USA | New Hampshire USA | Tennessee USA | Amazon Venezuela |
| Dominant Species | black spruce | Douglas- fir | sugar maple -beech | oak- hickory | mixed species |
| Age (yr) | 55 | 42 | 55 | 30-80 | mature |
| Nitrogen | kg N ha⁻¹ | | | | |
| Overstory | 134 | 316 | 491 | 497 | 1670 |
| Understory | 51 | 21 | 9 | — | — |
| Forest Floor | 657 | 233 | 1100 | 334 | 406 |
| Mineral Soil | 2200 | 2476 | 3600 | 4500 | 3507 |
| Total Ecosystem | 3042 | 3046 | 5200 | 5331 | 5583 |
| % in Soil & Litter | 94% | 89% | 90% | 91% | 70% |

Forest Nutrition & Biogeochemistry

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - Forest Management

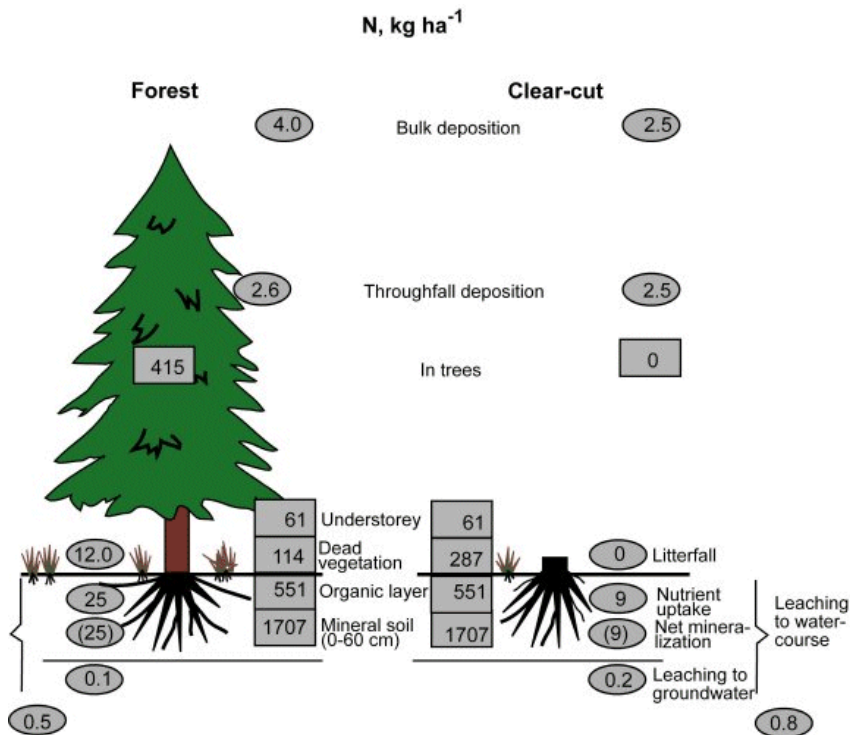

Table 19.11 The nutrient balance for whole-tree harvested trembling aspen ecosystems in northern Minnesota.

| | Nutrient | | | | |
|---|----------|-------|--------------------------|--------|--------|
| | N | P | K kg ha ⁻¹ | Ca | Mg |
| Annual Input | | | | | |
| Precipitation | 6.9 | 2.6 | 9.5 | 5.0 | 1.7 |
| Weathering | 0 | 0.4 | 8.7 | 20.8 | 10.4 |
| N ₂ Fixation | 3.0 | - | - | - | - |
| Ecosystem Storage[†] (kg ha⁻¹) | | | | | |
| | 4834.0 | 147.8 | 642.5 | 9081.0 | 1866.3 |
| Output | | | | | |
| Normal Annual Leaching | 0.4 | 0.6 | 3.6 | 28.8 | 11.3 |
| Accelerated Leaching* | 0 | 0 | 0 | 62.3 | 0 |
| Removal in Biomass | 452.0 | 43.1 | 354.6 | 1034.0 | 94.5 |
| Years to Replenish Harvest Losses[§] | | | | | |
| | 48 | 18 | 24 | -# | 118 |

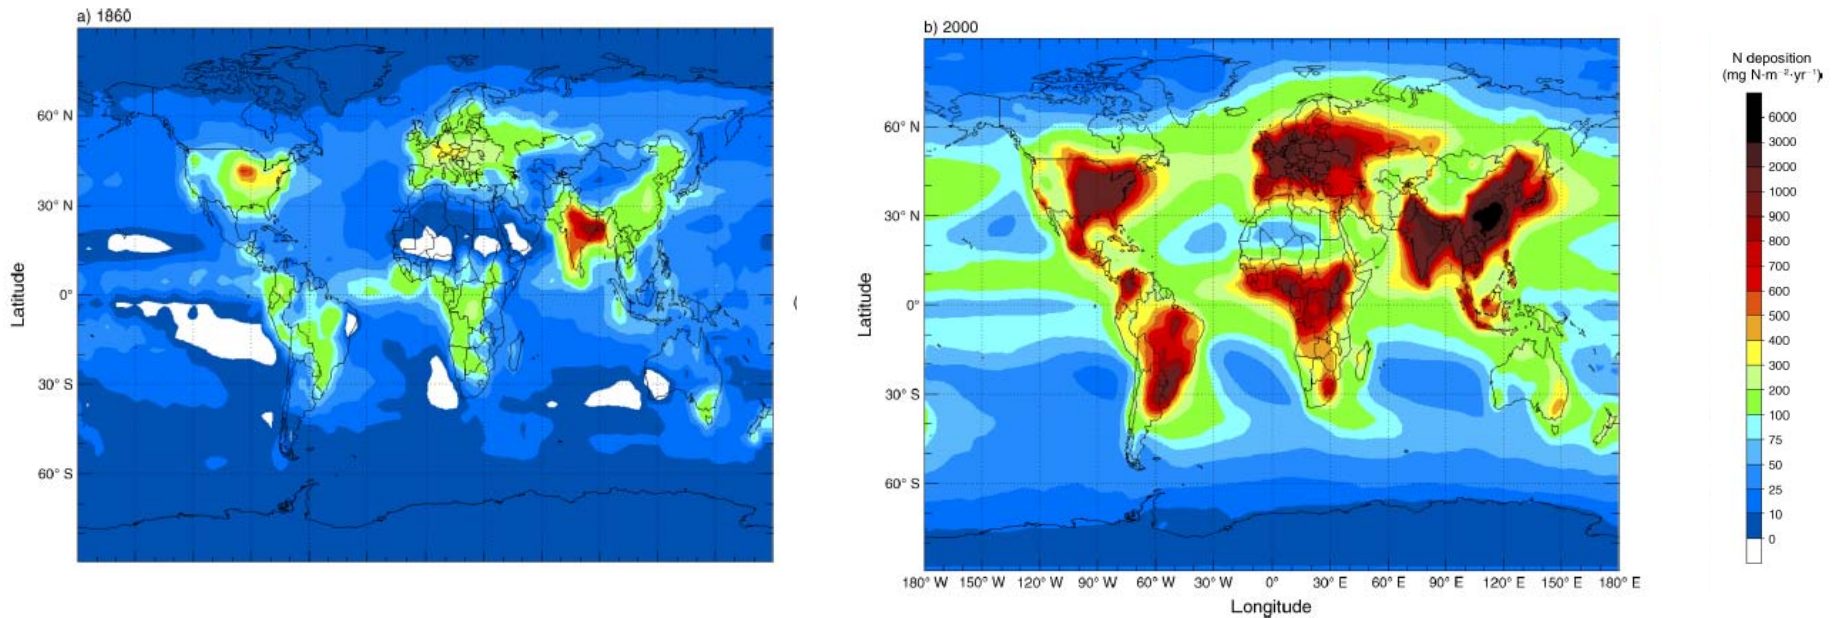

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - N vs. P Biogeochemistry

Forest Nutrition & Biogeochemistry

- Nutrient Cycling - Human Impacts

Bobbink et al. (2010)

Forest Nutrition & Biogeochemistry

- Forest Management
 - Trees require a suite of macro- and micro-nutrients to grow
 - Management activities can adversely impact nutrient “capital”
 - Management can also minimize nutrient loss, or even increase nutrient supply if done properly
 - Sustainable management of SOM, and the nutrients contained therein, is crucial to nutrient cycling

Site nutrient management and site organic matter management must become a major component of sustainable forest management systems (Kimmins 2004).
