

Picture Yourself—

- developing conservation and nutrient use plans to protect land against soil erosion and enhance water quality
- managing recycling efforts of a city, firm, or another enterprise
- making decisions regarding the best uses of land when a town encroaches on farms
- developing environmental impact statements
- teaching high school science and contributing to solving environmental problems with your students . . .

MAJOR

Natural Resources and Environmental Management

Picture yourself...

Sound like
your vision
for the
future?

Then . . .

Natural Resources and Environmental Management Is for You!

Natural
Resources and
Environmental
Management
(NREM) offers an
exciting new, inter-
disciplinary Bachelor
of Science degree
devoted to the sus-
tainable manage-
ment of our environ-
ment and natural
resources.

All students take a common set of 15 courses that provide a foundation in the natural sciences, apply natural and social science concepts within a four-year core sequence, and develop professional skills in quantitative methods, public speaking, cultural sensitivity, and mapping. Students also select one of the two following tracks:

- **Resource Management and Conservation**—focuses on the biological and physical science aspects and management of natural resource systems.
- **Resource Development and Policy**—emphasizes the social, cultural, and economic aspects of managing natural resources and the environment

Work with Top Professors . . .

. . . and join an international, award-winning group that includes world-re-
nowned agriculturists, soil scientists, and agricultural and resource economists
who are graduates of such schools as UC-Davis, Cornell, Illinois, and other top
universities. Get to know and learn from these professionals in our small classes
and through laboratory and field experiences.

Use Cutting Edge Technology . . .

. . . such as a student microcomputer lab, a work-study center especially for
undergraduates, aqua-physics laboratory, global positioning systems, sophisticated
analytical monitoring instruments and software.

Team up with Award-Winning Students . . .

. . . recognized locally, nationally, and internationally for their achievements.

Open Doors to New Careers and Opportunities

Follow the **Resource Management and Conservation** track and find employ-
ment as an erosion control specialist, an environmental inspector, a watershed
manager, an ecotourism manager, or a science teacher. Follow the **Resource
Development and Policy** track and work as an environmental policy analyst, an
environmental compliance officer, or in Hawai'i community development.

For Fun and Friends . . .

The College of Tropical Agriculture and Human Resources has numerous student
organizations that provide you with the opportunity to meet new friends with
interests similar to yours and participate in social, community service, and field-
related activities. The University of Hawai'i-Mānoa campus is located in a lush
tropical valley, only minutes away from mountain forests, coral reefs, and other
natural habitats to enjoy.

Are You Prepared?

Freshmen that meet UHM general admission requirements can be admitted
directly to the **Natural Resources and Environmental Management** pro-
gram. Students who want to transfer into the NREM major are required to have a
2.5 GPA. Transfers from outside UHM need 24 transferable credits. Prospective
students are encouraged to
contact the NREM advising staff
early in their college program
for assistance in selecting
introductory courses and
planning an individual course
of study. To streamline a
student's progress toward a
degree, advising is mandatory
for NREM majors.
