## PLANT MATERIAL

Achieving a successful green wall requires proper plant selection and continual maintenance of irrigation and nutrition equipment. The degree of pruning and plant replacement will depend upon the plants chosen. Plant selection will depend upon a number of factors including temperature, growth rate, foliage texture, and availability. In this innovative area of horticulture, it is best to consult with horticulturists who can provide information regarding the most successful plant choices.

A short list of high performance interior plants for green walls suggested by experts.

Lipstick Plant                   *Aeschyanthus radicans*

Asparagus Fern                 *Asparagus densiflorous 'Sprengerii'*
